

Mycenax Biotech Inc.

Green initiatives in response to environmental protection

1.Green Procurement

Mycenax adopts a sustainability approach, prioritizing the purchase of environmentally friendly and energy-efficient products with eco-labels, as well as low-pollution green products (e.g., laptops, laser projectors, copy paper, etc.). The sustainability concept is implemented in the procurement department and extended to our partner suppliers.

2.Green Actions

Mycenax encourages employees to use eco-friendly utensils, office supplies, and practice resource recycling. We also purchase sanitary paper with eco-labels and implement waste sorting (e.g., setting up recycling bins for paper, plastic, used batteries, etc.).

3.Electronic Systems

Mycenax combines in-person and E-learning training methods, provides electronic slides, and most meetings and communications are conducted via video conferencing, with no printed materials provided. Additionally, internal documents that do not involve personal data or confidential information are printed on both sides.
